Tagline	A unified network of off-chain services – like automation, oracles, and co-owned AI.
Mission	A unified network of off-chain services – like automation, oracles, and co-owned AI. Autonomol offers a composable stack for building these services, and a protocol for incentivizing their creation. Autonomol enables operating these services in a co-owned and decentralized way.
Description , AI-specific:	Autonomol services are perfect for combining crypto and AI, running complex logic in a decentralized manner, and interacting with on- and off-chain data autonomously and continuously. A novel use case of this cutting-edge autonomous agent technology is Governatooor , the AI-enabled governance delegate for DAOs.
Name guidance	Olas DAO is a synonym for Autonomol DAO, Olas is simply used when Autonomol is a mouthful. It mirrors the name of the token, OLAS.
